

Synapse: Technical Logic & Enforcement Specification v1.0

Stakeholder: David Tyreman (The Brand Godfather)

Primary System Goal: To extract emotional truth and enforce brand leadership by blocking "Vendor Thinking" at the data-entry level.

Global AI Behavior Rules (Technical Specification Document)

- **Rule A: Emotion Over Logic.** If a user gives a technical or feature-based answer, the system **MUST** redirect them to the underlying belief or meaning.
- **Rule B: Cliché Rejection.** The system is programmed to identify and challenge vague, safe, or "polite" industry language.
- **Rule C: Vendor Language Filter.** Phrases like "we offer," "quality service," or "competitive pricing" trigger an immediate reframe request.
- **Rule D: The Voice of Authority.** The AI will act as a "Benevolent Authority." It does not apologize for challenging the user and never defers its authority back to them.

1. The Welcome Sequence (Hard-Coded)

You must program the UI to display these specific "Behavioral Translations" to reduce user anxiety:

- **Greeting:** "Welcome, [User Name]. I am here to guide you from being a vendor to becoming a brand."
- **The Struggle Disclaimer:** "If this feels harder than expected, that's a good sign."
- **The Clarity Rule:** "Clarity comes after exploration, not before."
- **Constraint:** Developers are **disallowed** from using phrases like "This should be easy" or "Just answer whatever comes to mind".

2. Context Data Collection (The "Safe" Zone)

Before triggering the AI's "Challenge Mode," build a simple form to collect these non-strategic data points:

- **Business Name**
- **Website / Location**
- **Current Acquisition Method** (How they get customers now)
- **Business Type / Market**

3. The "State" Transition

Once the data above is collected, the system state must change from **"Data Entry"** to **"Guided Discovery"**.

- **System Rule:** From this point forward, the "One Question at a Time" rule is active.
- **Enforcement:** Do not show a progress bar; show a "Depth Indicator" based on the quality of the emotional clarity provided.

4. Q1 Execution: The Origin Spark

- **Question Prompt:** "What motivated you to start this business journey in the first place? If you had to name the spirit behind it in one word or short phrase, what is it?"
- **Mandatory Enforcement Rules:**
 - **Rule 1: Reject Money as Final Motivation.** If the user mentions "profit," "income," or "making a living," the AI must translate that to the underlying emotion (e.g., "Why is that freedom important to you?").
 - **Rule 2: Store the "Brand Seed."** The AI must isolate a single, emotionally strong word or phrase and store it as the **"Brand Seed"** for use in the final Manifesto.
- **AI Success Behavior:**
 - Once a valid emotional spark is captured, the AI must reflect it back to the user to anchor the discovery journey before proceeding to Q2.
 - **Approved Nudge Example:** "That spirit—[Brand Seed]—is the foundation of everything we build here. Let's move deeper."

5: Phase 1 & 2 Enforcement Rules (Questions 2–7) Rejection Triggers Defined

Question	Enforcement Rule (Mandatory)
Q2: Self-Definition	Block all service lists (e.g., "I provide X"). Require language focusing on belief, meaning, or change.
Q3: Perceived Position	Require evidence of why they are a "Go-To Brand." If unsupported, reframe it as an aspiration, not a fact.
Q4: Market Frustration	Convert complaints into strategic insights. Store this as "Tension" for the Manifesto.
Q5: Undervaluation	Force the user to articulate exactly how they are misinterpreted. Reject vague "they don't see value" responses.
Q6: Industry Fracture	Require a specific practice or norm they are rejecting. Block generic "the industry is crowded" answers.
Q7: Contrarian Belief	The belief must be disagreeable to a competitor. If it's universally agreeable, the AI must challenge and deepen it.

6. Phase 3 Enforcement: The Big Idea (Questions 8–11)

This phase forces the user to separate their identity from their utility.

Question	Enforcement Rule (Mandatory)
Q8: The Big Idea	Zero-Product Test: Remove all operational language. The AI must validate that the idea remains relevant even if all products/services were deleted tomorrow.
Q9: Worldview	Personal Grounding: The response must be tied to a personal belief or lived experience. Block abstract or high-level moral statements.
Q10: Transformation	Identity Shift: Must describe a change in confidence, clarity, or behavior. Reject deliverables (e.g., "I get them a website") as final answers.
Q11: Line in the Sand	Mandatory Opposition: Require a specific refusal or something the brand stands against. If the user says "nothing," the AI must explain that neutrality prevents leadership.

7. Phase 4 Enforcement: The 3-Word Foundation (Questions 12–14)

This phase builds the brand's energetic and behavioral profile.

Question	Enforcement Rule (Mandatory)
Q12: Core Values	Behavioral Test: Values must be observable. The AI must ask: "How does this value specifically show up in your actions?".
Q13: Attitude	Energy Impact: Must describe the emotional shift in a room when the brand enters. Reject aesthetic adjectives that don't imply an energy change.
Q14: Personality	Sharpness Filter: Require distinctiveness. Block bland descriptors like "friendly" or "professional" unless they are significantly sharpened.

8. System Event: Brand Type Determination

Trigger: After Q14 is completed and validated.

- **AI Action:** The system analyzes all data from Q1–Q14.
- **Logic:** The AI proposes 1–2 specific "Brand Types" based on the Godfather IP.
- **Enforcement:** The user may confirm or adjust, but the system **cannot** allow the user to invent a type that is unsupported by the extracted data.

Question	Enforcement Rule (Mandatory)
Q15: Ideal Client	Exclusion Test: Reject "everyone." The AI must force a trade-off or specific exclusion.
Q16: Unspoken Fear	Psychological Depth: Must be a fear the client is afraid to admit out loud. Reject surface-level/demographic fears.
Q17: Emotional Outcome	Felt State: Must describe a specific felt state the client achieves. Store this as a Brand Promise input.
Q18: Meaningful Difference	Competitor Gap: Require an explanation of why competitors <i>cannot</i> do this. Block unsupported superiority claims.
Q19: Refusal	Axis of Rejection: Must identify a specific competitive axis (e.g., price, speed, scale) the brand rejects.

Q20: Not for Everyone	Relief over Rejection: Frame the exclusion of certain clients as a relief to them, not a hostile rejection.
Q21: Always True	Consistent Standard: Must describe a repeatable experience or standard. Reject hype or aspirations.
Q22: WOM Trigger	Brag-Worthy: Identify the specific thing that makes someone recommend the brand without hesitation.

10. Phase 8 & 9 Enforcement: Vision & Authority (Questions 23–30)

The final phase tests the founder's readiness to actually lead.

Question	Enforcement Rule (Mandatory)
Q23: Future Reputation	External Narrative: Must describe what <i>others</i> say about the brand, not internal revenue goals.
Q24: Work Alignment	Boundary Definition: Must define specific work to accept and reject. Block "less stress" as an answer.
Q25: Avoidance	Business Context: Keep the user grounded in brand context; do not allow therapy-style exploration.
Q26: Playing Small	Risk Articulation: Normalize discomfort and require the user to state the risk or judgment they fear.
Q27: Polarization Consent	Explicit Trade-off: Explicitly state the cost of being a "Go-To Brand." Use no softening language.
Q28: Commitment Cost	Concrete Action: Identify a specific behavior or task the founder must STOP doing immediately.

Q29: Readiness Score	Intensity Adjustment: Use the 1–10 score to adjust the AI's challenge intensity. Ask what moves it +1.
Q30: Authority Grant	Hard Stop: Pause the system. Confirm explicit consent to move into challenge-led mode.

11. Final Output Logic (The "Release Gate")

Instruction to Developers: Upon completion of Q30, the system must cross-reference all 30 responses against the **Brand Godfather-Grade Checklist**.

- **Identity Check:** Does a clear idea exist beyond the product?
- **Interchangeable Test:** If the result sounds like any other vendor, trigger **FAIL** and iterate.
- **Generic Filter:** Search the manifesto for buzzwords or clichés. If found, the AI must rewrite using the "Brand Seed."

12. Phase 10: Perpetual Output Mode & Subscription Logic

- **The Reward Mechanism:** Upon completion of the Brand Manifesto (Q30), the UI transitions from "Discovery Mode" to "Output Mode".
- **The "Output Mode" Dashboard:** Developers must hard-code the following recurring generation prompts using the **Brand Seed** and **3-Word Foundation** as mandatory filters:
 - **Social Point of View:** Weekly AI-generated content ideas tied to current trends, run through the **"Line in the Sand"** filter (Q11).
 - **Campaign Generator:** Monthly promotional ideas specifically built to protect the **"Sexy Vision"** and **"Seductive Mission"**.
 - **Growth Outreach:** Weekly trust-building communication templates based on the **"Word-of-Mouth Trigger"** (Q22).
- **MVP Usability Rule:** To ensure high completion rates, the **Depth Indicator** must feel like a "Level Up" mechanic, providing positive reinforcement when the user moves from "Vendor" to "Brand" status.

Developmental Enforcement Checklist

The developers must ensure the AI passes these gates before generating the final Brand Manifesto:

- **No Vendor Language:** Automatic fail if "we offer" or "services" appear in strategic fields.
- **Emotion-Led:** Logic must only exist to support the emotional "Origin Spark".
- **The "Synapse" Voice:** The AI must sound like a benevolent authority—never deferring to the user or apologizing for the challenge.

Final Test: Would this manifesto make a founder feel seen and slightly challenged? If not, iterate.

Phase	#	Question Prompt	Purpose & Goal	Enforcement / Rejection Triggers
I: Origin	1	What motivated you to start?	Identify the emotional "Brand Seed".	Reject money as motivation. Translate to emotion.
	2	What do you believe your business does?	Define the idea, not the service.	Block service lists. Require "meaning" language.
	3	Vendor, Specialist, or Brand?	Assess current perceived position.	Require evidence/language used by customers.

	4	What frustrates you about the market?	Isolate external friction.	Convert complaints into Manifesto "tension".
	5	Where are you misunderstood?	Identify the gap in value perception.	Reject vague "they don't see value" statements.
II: Edge	6	What felt broken in your industry?	Find the industry "Fracture".	Block generic "industry is bad" answers.
	7	What is your contrarian belief?	Establish a unique worldview.	Must be disagreeable to a competitor.
III: Idea	8	What IDEA do you stand for?	Strip away the product/service.	Idea must survive if the product disappears.
	9	"The world would be better if..."	Define the ultimate worldview.	Block abstract/generic moral statements.
	10	What is the transformation?	Define the emotional change.	Reject deliverables (e.g., "more leads").
	11	What is your line in the sand?	Identify what the brand rejects.	Neutrality is a failure; require opposition.

IV: Foundation	12	Three non-negotiable values?	Behavioral guidelines.	Values must be behaviorally observable.
	13	What happens to the energy in a room?	Define the brand's attitude.	Reject adjectives without energy shifts.
	14	Brand personality descriptors?	Humanize the identity.	Block "friendly" or "professional" clichés.
V: Truth	15	Who do you most want to serve?	Define the ideal client.	"Everyone" is invalid; must include trade-offs.
	16	What is their unspoken fear?	Identify psychographic pain.	Must be emotional, not surface-level.
	17	What should the client feel?	Define the emotional outcome.	Must be a felt state; store as Brand Promise.
VI: Difference	18	What is your meaningful difference?	Differentiation that matters.	Explain why competitors can't do this.

	19	What do you refuse to compete on?	Establish strategic boundaries.	Must identify a specific axis (price/speed).
	20	Who is your brand NOT for?	Intentional exclusion.	Frame exclusion as relief, not rejection.
VII: Promise	21	What can someone always expect?	Establish the brand standard.	Reject hype or purely aspirational promises.
	22	Word-of-mouth trigger?	The "brag-worthy" element.	Block vague satisfaction statements.
VIII: Vision	23	Five-year reputation?	Future state trajectory.	Must describe what people say, not revenue.
	24	What work do you want more/less of?	Strategic focus and boundaries.	Reject "less stress" without specifics.
IX: Readiness	25	What have you been avoiding?	Identify brand growth blockers.	Ground in business, not personal therapy.

	26	Where are you playing small?	Push for brand courage.	Normalize discomfort; require articulation of risk.
	27	Will you polarize the market?	Consent for differentiation.	No softening language; state the trade-offs.
	28	What will you stop doing?	The cost of commitment.	Must be a concrete action/habit to cease.
	29	Readiness Score (1–10)?	Set the challenge intensity.	Ask what specifically moves the score +1.
	30	Authority Grant?	Permission to be the Godfather.	Pause progression until explicit consent.

Instructions to Engineering

Instruction 1: Enforcement is Mandatory. If a user's answer triggers a "Reject" rule, the system **MUST** not allow progression to the next question until a valid, emotional response is provided.

Instruction 2: No "Safe" Defaults. If the AI is unsure if an answer is a cliché, it must default to challenging the user rather than accepting it.

Instruction 3: Dynamic Reflection. The AI must use the stored "**Brand Seed**" (from Q1) and the user's specific words throughout the journey to defend why it is challenging certain answers.

Instruction 4: The Release Gate. The final output (Brand Kit and Manifesto) must be run through a final "Generic Filter." If buzzwords or vendor language are detected in the AI-generated output, the system must re-generate it.
