

## Subscription System Brief (MVP Scope)

**Project:** The Brand Godfather

**Purpose:** Define the minimum viable subscription system required for commercial launch

## 1. Objective

The subscription system must enable the platform to be **commercially launch-ready**, allowing users to:

- Sign up
- Subscribe
- Access the platform
- Manage their account

This system should be **simple, reliable, and scalable**, without unnecessary complexity.

## 2. Core Subscription Model

### MVP Structure:

- Monthly subscription plan (primary)
- Optional promotional pricing (e.g., early access or discounted rate)
- Free trial optional (can be enabled later if needed)

## 3. User Account & Access

Each user must have:

- Secure login (email + password)
- Access to their Brand Profile and Output Mode
- Ability to return and continue usage across sessions

## 4. User Dashboard (Basic)

The user dashboard should allow:

- Access to Brand Book
- Access to Output Mode
- View of subscription status
- Basic account settings

## **5. Subscription Management (User Side)**

Users must be able to:

- Subscribe to the platform
- View their subscription status
- Cancel subscription
- Pause subscription (if feasible for MVP, otherwise optional)

## **6. Payment & Billing**

System must support:

- Monthly recurring billing
- Secure payment processing (e.g., Stripe or equivalent)
- Automatic renewal
- Payment failure handling (basic retry logic)

## **7. Admin Visibility (Internal Use)**

Admin should be able to:

- View all users
- See active vs inactive subscriptions
- Access basic subscription data
- Monitor usage at a high level

## **8. Referral / Source Tracking (Important)**

Each user should have a field to capture:

- Referral source (e.g., salesperson, partner, campaign)

This data must be:

- Stored per user
- Exportable

### **Important:**

- Commission calculations will NOT be handled inside the system
- Commission payouts will be managed externally

## **9. Discounts & Coupons**

System should support:

- Basic discount codes
- Promotional pricing (e.g., early adopter pricing)

## **10. Data Export**

Admin must be able to export:

- User data
- Subscription data
- Referral/source data

## **11. MVP Constraints (Important)**

To avoid unnecessary complexity, the following are NOT required for MVP:

- Commission calculation system
- Tiered incentive tracking
- Complex analytics dashboards
- Multi-plan subscription tiers (can be added later)
- Advanced CRM functionality

## **12. Success Criteria**

The subscription system is successful if:

- Users can subscribe and pay without friction
- Users can access the platform immediately after payment
- Users can manage their subscription easily
- Admin can track and export basic data
